EDUCATION

Georgia Institute of Technology

Atlanta, GA

Bachelor of Science in Computer Science - 4.00 GPA

May 2026

Threads: Intelligence (AI, ML), Computer Systems and Architecture

Coursework: Machine Learning, Database Systems (SQL), Computer Networking (C/Assembly), Data Structures and Algorithms (Java), Computer Systems (C/Assembly), Intro to OOP (Java)

EXPERIENCE

Software Engineering Intern

Aug 2024 - Dec 2024

Itential - Network Automation Startup - Raised >\$29,000,000 dollars

Atlanta, GA

- Configuring external APIs to work with network adapter builder via automated checks of security, IDs, etc.
- Spearheaded development of proper auth checking on compliance checker of networking adapters (e.g. Nokia)
- Building out new product to facilitate ~ 10% greater speed in building new network adapters for external APIs

Data Engineering Intern

Summer 2024

State Farm - Financial Operations

Dunwoody, GA

- Developing ML models on AWS Sagemaker to reduce unnecessary claim loss reserves by up to 15%
- Deploying proper data warehousing and data marts to AWS Redshift to increase querying efficiency by up to 30%
- Implementing time series models (ARIMA, UCM, etc.) to forecast necessary premium costs on a zip code basis

Student Researcher

November 2023 – Present

Embedded Pervasive Lab

Atlanta, GA

- Manipulating Linux CPU governors in C/C++ to measure latency on CPU given different hierarchies
- Researching resource scheduling on Kubernetes clusters to optimize CPU utilization in deployment environments
- Testing methods for reducing Redis end-to-end latency on Georgia Tech compute clusters via Memtier

Software Engineer Intern

June 2022 – Present

Georgia Tech Research Institute - Robotarium

Atlanta, GA

- **Publication (ASEE):** Creating Hardware-Accessible Learning with the Robotarium and Block Coding
- Implemented optimizations on Python (Flask)/MATLAB backend for 50% faster robotics simulation load times
- Deployed Docker image onto AWS EC2 instance (Ubuntu) that handles swarm robotics load for over 600 users

Engineering Manager

Jan. 2023 – Present

Georgia Tech Bits of Good - A Hack4Impact Chapter

Atlanta, GA

- Managed team of 4 developers to create a management and report generation system for environmental standards
- Revamped Azure deployment cycles and converted all servers to serverless reducing costs by 40%
- Debugged React and NodeJS code and helped fix Azure deployment issues on 3 different deployment envs

PROJECTS

Exploratory Web Browser - Idea To Prototype | Python (OpenAI), Electron.js, React

July 2023 – Present

- Pioneered a browser that uses AI generated maps and graphs to promote research-specific exploration on the web
- Employed ML driven map algorithms to accelerate web query generation and research exploration by 35%
- Building through GT I2P incubator (\$500 grant) and Buildspace, got to YCombinator interview stage for S24
- After MANY pivots, currently in alpha testing, reach out if interested!

xv6 Operating System | x86 Assembly, C

January 2023 – Present

- Creating kernel and user level processes to add modifications to the xv6 operating system
- Implemented copy-on-write forking and lazy zero page allocation to increase effective memory by 30%
- Working on optimizing round-robin scheduling algorithm to increase efficiency of process scheduling

TECHNICAL SKILLS

Languages: Java, Python, C, C++, C#, JavaScript, Node.js, TypeScript, Assembly, HTML5, SQL, Go

Technologies: React, Angular, Flask, MySQL, Postgres, MongoDB, OpenCV, TensorFlow, PyTorch, ExpressJS, JIRA, Confluence, Numpy, Pandas, Matplotlib, Scikit-learn, Next.js, Vercel, React Native, jQuery

Developer Tools: Git, Docker, CI/CD (Travis, Jenkins, etc.) Google Cloud Platform, AWS, Microsoft Azure, Kubernetes, Firebase, Linux (Ubuntu, Debian, Arch)
